

Difference between http/1.1 & http/2

HTTP/1.1	HTTP/2
It is used in the textual format.	It works on the binary protocol.
There is head of line blocking that blocks all the requests behind it until it doesn't get its all resources.	It allows multiplexing so one TCP connection is required for multiple requests.
It uses requests resource Inlining for use getting multiple pages	It uses PUSH frame by server that collects all multiple pages
It compresses data by itself.	It uses HPACK for data compression.

Object representation:

An object can be created with figure brackets{..} that object contains a list of properties. A property is a {key:value} pair, the string that is called as a property name, and the value can be anything (string,boolean,etc)..

Example:

```
Let person={  
    Name:"prassaana",  
    Age: 20;
```

```
        Place:"madurai"  
    }  
    console.log(person)
```
